

- **Name:** Vijay Kumawat
- **Phone:** +91 8005623771
- **Email:** iamvjumawat@gmail.com
- **Location:** Jaipur, Rajasthan, India
- **Portfolio:** vijaykumawat02.github.io/Portfolio

Professional Summary

- Penetration tester with hands-on experience in **web and API security testing**. Skilled in identifying and exploiting **OWASP Top 10 and OWASP Top 10 API vulnerabilities**, with proven ability to deliver structured reports and actionable remediation steps. Experienced through **internships, and security research**, leveraging tools such as **Burp Suite, Metasploit, Nmap, Postman and Nessus**. Strong foundation in **networking, Linux, and cybersecurity fundamentals**, combined with practical project work including an **AI-powered pentesting assistant** and a **Python-based reconnaissance framework**.

Work Experience

- **Penetration Tester Intern – CyberXchange**
 - *March 2026 – July 2026 (4 Months)*
 - Hands-on Pentesting Experience with Real World projects.
 - Practiced Penetration testing on Portswigger labs.
 - Conducted Penetration Testing and vulnerability reporting.
 - Completed **Ethical Hacking** and **Penetration Testing** Training Tasks.
- **IT Research Intern – Content Topper**
 - *September 2023 – November 2023 (2 Months)*
 - Researched and tested vulnerabilities in **Web Applications, Active Directory, APIs, and Networks**.
 - Utilized platforms such as **PortSwigger, TryHackMe, Google Dorking, Bing AI (Copilot), ChatGPT**.
 - Documented findings in structured reports and presentations.
 - Learned best practices in penetration testing methodologies.

Projects

- **Project-Cyborg (AI Pentesting Assistant)**
 - Built an AI-powered autonomous penetration testing agent.
 - Automated reconnaissance workflows: subdomain enumeration, port scanning, stack identification.
 - Successfully identified **Reflected XSS** in a bug bounty program.
 - Generated structured reports with CVSS-based severity scoring.
- **Chitragupt (Copilot) – Feb 2026**

- Python-based web reconnaissance framework for bug bounty hunters.
- Automated execution of multiple tools and generated structured summary reports.
- **Port Scanner Project – Sep 2023**
 - Developed a Python 3-based multithreaded port scanner.

Skills

Penetration Testing:

- Web Application Pentesting • API Security Testing • Vulnerability Assessment

Technical Knowledge:

- Cybersecurity Fundamentals • Computer Networking • Linux Administration • Active Directory Security • API Security Fundamentals

Tools & Frameworks:

- Burp Suite • Metasploit • Nmap • Nessus • SQLMap • Postman • AI for Reconnaissance and Automation
- OWASP Top 10 • OWASP API Security Top 10

Programming:

- Python (automation, reconnaissance tools, multithreaded scanners) • Scripting for security workflows

Education

- **Bachelor of Computer Applications (BCA)** – Sri Balaji P. G. Mahavidyalaya, 2023
- **IT Level 4 Diploma (4 years)** – Govt Sr. Sec. School, 2020

Certifications

- Certified AppSec Practitioner (SecOps)

Courses

- API Penetration Testing (APISEC University)
- OWASP API Security Top 10 and Beyond (APISEC University)
- API Security Fundamentals (APISEC University)
- CEH v12 (CyberSapiens Internship)
- Bug Hunting Essentials (CyberSapiens Internship)
- CompTIA Pentest+ (TryHackMe)
- Practical Ethical Hacking (TCM Sec)
- Practical Web Application Security and Testing (TCM Sec)
- Website Hacking Techniques (EC-Council)
- Ethical Hacking Essentials (EC-Council)

Focus Areas

- Web Application Penetration Testing
- API Penetration Testing
